

2-Level Workbench & Shelf Unit

DESCRIPTION – FEATURES & BENEFITS

- Increase your storage space - a full 2.4m x 0.6m bench top plus a matching full-length shelf beneath it, so tools, bins, and materials get organised off the floor instead of piling up.
- Built to work hard - solid 90x45 timber framing (four legs, front/back and side framing) give a rigid, stable base that won't rack or wobble under load.
- Durable 15mm ply top and shelf stand up to daily knocks, spills, and heavy tools without flexing.
- Fits most Lifestyle sheds/cabins as a drop-in bench and shelf combo or stands alone as a freestanding workbench in an existing garage, workshop, or garden shed.
- Generous 600mm bench depth gives real elbow room for projects, with a 500mm clearance shelf below for bulkier items.
- Straightforward flat-pack construction using standard timber sizes. Simple to build, and simple to replace a component if it ever takes a hit.

PRODUCT BLURB

Turn wasted shed space into serious storage and workspace. This 2.4m workbench pairs a full-length bench top with a matching full-length shelf underneath, giving you a solid work surface up top and a dedicated home for bins, tools, and gear below — all in one unit. Built from robust 90x45 pine framing and durable 12mm ply, it's designed to handle real workshop use for years, not just look good on day one.

SPECIFICATIONS
